GitHub Copilot Chat — Features Overview

1. Copilot Chat inline (in-file)

Invoking chat directly inside a file with **Ctrl/Cmd+I**.

2. Edit mode

Copilot edits that auto-save with accept/undo UI (the square+circle indicator in the file explorer).

3. Participants (@)

@**github**, @**terminal**, @**vscode**, @**workspace** for scoping questions.

4. Slash commands (/)

/fix, **/explain**, **/tests**, **/search**, **/clear**, **/help**.

5. Tools (#)

Built-in tools invoked with #, including the fetch tool for live web page reading/documentation lookup.

6. MCP (Model Context Protocol) servers

Extending Copilot tools with custom MCP servers.

7. Autocomplete / inline suggestions

Copilot as an advanced autocomplete engine.
